Published / Filed: May 12, 2000 / Oct. 29, 1998

Application Number: JP1998000307945

IPC Code: H04N 7/18; G08B 13/196; G08B 25/08; H04L 12/28;

Priority Number: Oct. 29, 1998 JP1998000307945

Abstract:

PROBLEM TO BE SOLVED: To provide a remote monitoring system capable of acquiring the desired image from a monitoring device connected through a network.

SOLUTION: A processing control part 29 discriminates the motion of a frame image picked up by an image pickup device 21 and records the moving frame image in a data recording part 28. When transmission request information sent from a remote managing device is received through a communication control part 32, the processing control part 29 reads the frame image of an object recorded in the data recording part 28 to a read buffer 30. While controlling the communication control part 32, the processing control part 29 sequentially transmits the frame images read to the read buffer 30 through communication equipment 31 to the remote managing device.
